ELIMINATE

maternal/neonatal tetanus

Kiwaniis | **unicef**

BY THE NUMBERS

1234

One baby dies every **9** minutes from neonatal tetanus.

160 babies die each day from neonatal tetanus.

480 babies will die from tetanus while we're attending this convention.

Our goal is to raise US\$**110** million to eliminate MNT by 2015.*

*To eliminate maternal and neonatal tetanus, more than 100 million women and their future babies must be protected—at a cost of roughly US\$240 million. Millions of dollars have already been committed. Our goal is to raise US\$110 million by 2015, filling the funding gap and becoming the world's largest single donor for MNT elimination.

On average, health education and a series of three doses of tetanus vaccine cost US\$1.80.

Using this average, Kiwanis will help save or protect more than 61 million mothers and their future babies.

38 countries remain at high risk for MNT.

Ultimately, 9,000 Kiwanis leaders will help achieve our fundraising goal.

The Eliminate Project's fundraising campaign culminates in 2015.
